

Title: Development, Compilation and Use of Input-Output Supply and Use Tables in the United Kingdom National Accounts

Author: Sanjiv Mahajan

Institution/Country: Office for National Statistics, United Kingdom

In the UK, the first official Input-Output Tables were published in 1961 for the year 1954, and have been produced roughly every five years as needed for the National Accounts rebasing of constant price estimates. However, since 1991/2, the production of Input-Output (I-O) Supply and Use Tables have been a central part of the UK's National Accounts and have been used to set the annual level of current price Gross Domestic Product.

This paper looks at the development of Input-Output in the UK and provides:

- **History and development** of I-O Supply and Use Tables.
- **Compilation and methodology** of I-O Supply and Use Tables, and **annual coherence adjustments** to GDP.
- Development of **data sources** used.
- Stages of **integration with National Accounts**.
- Development of **new analyses** based on I-O Supply and Use Tables to increase their value to **users**.

The paper also describes the UK's approach to maintaining consistent I-O Supply and Use Tables over time, handling revisions and the **planned improvement of the National Accounts** through the development of quarterly and annual I-O Supply and Use Tables both in current and previous years' prices. The paper also covers the UK's approach to meeting demands for data from the Statistical Office of the European Community (Eurostat).
